MAGNUM FORGE COMPLETES IMPLEMENTATION OF ENERTIA ENERGY UPSTREAM ERP SOFTWARE AT TULSA-BASED OIL AND GAS COMPANY

TULSA, OK – February 3, 2017 – Magnum Forge, an upstream energy IT management consulting firm, announces another successful implementation of Enertia’s upstream ERP software suite at a large Tulsa-based E&P company. The Tulsa company, a diversified energy company engaged in exploration and production of oil and natural gas, contract drilling of onshore oil and natural gas wells, and gathering and processing of natural gas, selected Enertia Software to help bring the energy company’s integrated operations together under one software to simplify reporting and processing and increase efficiency across the organization and to retire their AS400 solution.

Magnum Forge assisted with data conversion validation, system configuration, system and user acceptance testing, audit documentation, and project management. The client also relied heavily on our team to perform ad hoc training and business simulation exercises. Magnum Forge’s strong knowledge of upstream business processes helped to streamline design decisions and identify business scenarios relevant to the E&P company. Magnum Forge also designed and tested the security setup and worked with the company’s internal audit team to document key controls.

“This project presented many challenges due to the client’s size, complexity of operations, and decades of historical data to be converted,” said Zeshan Sharif, Magnum Forge Senior Manager and Project Lead. “Our team’s deep knowledge of upstream oil and gas allowed us to meet the client’s high standards for data quality, user training, and process design.”
